Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A method of injecting control content into a displayed document,~~which is displayed by an accessing device, the method~~ comprising:

receiving~~information at a server, wherein the received information identifies downloadable~~ information;

determining whether the received information contains a ~~specified location;~~link to a retrievable item;

~~inserting, if the received information contains the specified location, the injectable~~inserting injectable control content into the received information at ~~the specified location, wherein inserting the injectable content includes associating the injectable content with the downloadable information accessible by the server;~~a specified location relative to the link to a retrievable item; and

outputting the received information including the injectable ~~content to the accessing device;~~control content to a display device,

~~selecting the injectable content displayed by the accessing device; and~~

~~outputting to an output device the downloadable information identified by the injectable content without routing data contained in the downloadable information through the accessing device.~~wherein the injectable control content may be selected by a user to perform a functional operation upon the retrievable item.

2. (Original) The method of claim 1, wherein receiving information includes receiving information in the form of a document.

3. (Cancelled)

4. (Currently Amended) The method of claim 1, wherein the specified location is adjacent to ~~any downloadable information~~a retrievable item identified in the received information.

5. (Currently Amended) The method of claim 4, wherein the ~~downloadable information~~retrievable item identified in the received information is at least one of a file, a folder, a picture, a movie, a sound, or a document.

6. (Cancelled)

7. (Cancelled)

8. (Currently Amended) The method of claim ~~7,~~1, wherein ~~selectable~~the injectable control content includes at least one of~~a link to another document source, a data reduction function, an information filtering function, a calculation performing function,~~ an information printing function, an information storing function, a processing function, or a document viewing/editing function.

9. (Currently Amended) The method of claim ~~7,~~1, wherein ~~selectable~~the injectable control content provides processing of the retrievable item without installing software on ~~the~~an accessing device.

10. (Currently Amended) The method of claim ~~7, wherein processing of the selectable injectable content is provided within a server.~~1, wherein the functional operation is performed by a server that is separate from, and in communication with, the display device.

11. (Cancelled)

12. (Original) The method of claim 1, wherein the specified location to insert the injectable content is determined by a user.

13. (Previously Presented) The method of claim 1, wherein receiving information includes receiving information using at least one of either a wired connection or a wireless connection to a network.

14. (Currently Amended) The method of claim 1, wherein outputting the received information includes forwarding using at least one of either a wired connection or a wireless connection to ~~a network.~~the display device.

15. (Currently Amended) An apparatus, ~~coupled to an accessing device,~~ for injecting control content into a displayed document,~~which is displayed by the accessing device, the apparatus~~ comprising:

an input circuit that receives incoming~~information, wherein the incoming information identifies downloadable~~ information;

a content database that stores injectable control content;

a memory that stores a location for inserting the stored injectable control content into the ~~incoming~~received information;

a content monitoring circuit that monitors the incoming information for a ~~location to display the injectable content in the document, which is displayed by the accessing device;~~link to a retrievable item;

a content injection circuit that injects the injectable control content into the incoming ~~information, wherein the injectable content includes selectable injectable content associated with the downloadable information;~~information at a specified location relative to the link to a retrievable item; and

an output circuit that outputs the ~~incoming information with the injectable content, wherein the output circuit outputs the downloadable information associated with the selectable injectable content to an output device without routing data contained in the downloadable information through the accessing device, which displays the document.~~received information including the injectable control content to a display device,

wherein the injectable control content may be selected by a user to perform a functional operation upon the retrievable item.

16. (Cancelled)

17. (Cancelled)

18. (Currently Amended) The apparatus of claim 15, wherein ~~selectable~~ injectable control content includes at least one of ~~a link to another document source, a data reduction function, an information filtering function, a calculation performing function,~~ an information printing function, an information storing function, a processing function, or a document viewing/editing function.

19. (Currently Amended) The apparatus of claim 15, wherein ~~selectable~~<u>the</u> injectable control content provides processing <u>of the retrievable item</u> without installing software on ~~the~~<u>an</u> accessing device.

20. (Cancelled)

21. (Currently Amended) A control system that injects <u>control</u> content into a document, ~~which is displayed by a computer device,~~ the control system comprising:

an input circuit that receives incoming ~~information identifying downloadable~~ information;

a content database that stores injectable <u>control</u> content;

a memory that stores a location for inserting the stored injectable <u>control</u> content into the received information;

a content monitoring circuit that monitors the ~~received~~ incoming information for a ~~location to display the injectable information, which is displayed by the computer device;~~<u>link to a retrievable item;</u>

a content injection circuit that injects the injectable <u>control content into the incoming</u> information ~~into the received incoming information;~~<u>at a specified location relative to the link to a retrievable item;</u> and

an output circuit that transmits the received~~incoming~~ information

~~with~~including the injectable ~~information~~control content to a display manager of ~~the~~a

computing device,

wherein the display manager displays a graphical user interface displayable on

the computing device, the graphical user interface comprising injectable ~~content,~~control

content, and

wherein the injectable control content may be selected by a user to perform a

functional operation upon the retrievable item.

~~wherein injectable content includes selectable injectable content associated~~

~~with downloadable information, and~~

~~wherein the downloadable information contains data, which is not routed~~

~~through the computer device, which displays the document.~~

22. (Cancelled)

23. (Cancelled)

24. (Currently Amended) The control system of claim 21, wherein the~~selectable~~

injectable control content includes at least one of~~a link to another document source, a data~~

~~reduction function, an information filtering function, a calculation performing function,~~ an

information printing function, an information storing function, a processing function, or a

document viewing/editing function.

25. (Currently Amended) The control system of claim 21, wherein at least one

injectable control content includes at least one selectable icon to access at least one treatment

option screen.

26. (Currently Amended) The control system of claim 25, wherein the treatment

option screen has at least one option to process ~~downloadable information~~a retrievable item

identified in the received information.

27. (Currently Amended) The control system of claim 26, wherein the treatment option screen is separately displayed for each ~~downloadable information~~retrievable item identified in the received information.

28. (Currently Amended) The control system of claim 27, wherein each treatment option screen is sequentially displayed for each ~~downloadable information~~retrievable item identified in the received information.

29. (Currently Amended) The control system of claim 28, wherein ~~each~~the treatment option screen includes a selectable icon to return to a previous treatment option screen.

30. (Currently Amended) The control system of claim 25, wherein the treatment option screen has at least one first portion identifying each ~~downloadable information~~retrievable item identified in the received information to be processed, at least one second portion for identifying each ~~downloadable information~~retrievable item identified in the received information not to be processed, and at least one control for moving ~~the identification of each secondary recipient~~a retrievable item identifier between the first and second portions.

31. (Currently Amended) The control system of claim 25, wherein the treatment option screen lists each ~~downloadable information~~retrievable item identified in the received information.

32. (Currently Amended) The control system of claim 31, wherein the list includes at least one markable box, each markable box associated with one ~~downloadable information~~retrievable item identified in the received information.

33. (Currently Amended) The control system of claim 32, wherein ~~each~~a marked markable box indicates that the associated ~~downloadable information~~retrievable item identified in the received information is to be processed, and ~~each~~an unmarked markable box

indicates that the associated ~~downloadable information~~retrievable item identified in the received information is not to be processed.

34. (Currently Amended) The control system of claim 32, wherein ~~each~~a marked markable box indicates that the associated ~~downloadable information~~retrievable item identified in the received information is not to be processed, and ~~each~~an unmarked markable box indicates that the associated ~~downloadable information~~retrievable item identified in the received information is to be processed.

35. (Original) The control system of claim 25, wherein the treatment option screen includes a selectable icon to accept the treatment identified on the treatment option screen.

36. (Original) The control system of claim 25, wherein the treatment option screen includes a selectable icon to exit the treatment option screen.

37. (Currently Amended) The control system of claim 25, wherein the treatment option screen ~~comprises~~includes at least one portion having at least one option to display the injectable control content~~in at least one of either the top or bottom of the received information, at least one option to display the injectable content in at least one of either the right margin or the left margin of the received information, and at least one option to display the injectable content~~ adjacent to ~~any downloadable information~~a retrievable item identified in the received information.

38. (New) The method of claim 1, wherein the functional operation is performed by the display device.

39. (New) The method of claim 1, wherein:

receiving the information comprises receiving the information at a server; and

inserting the injectable control content includes the server associating the injectable control content with a retrievable item.

40. (New) The method of claim 1, wherein:

the information is received at the display device; and

the injectable control content is inserted by the display device.
